

# Endostar E3 Azure

# Clinical cases

# Product information

30/08 25/06 30/04

20/06 25/04 20/04

35/04 40/04 45/04

Straight, lightly or moderately curved canals.

Narrow and curved canals.

Wide canals.

Endostar E3 Azure.  
Enjoy the difference. The power of Azure.

www.endostar.eu

# Innovation and safety

Endostar E3 Azure is an innovative system created with Azure HT Technology which is our specially designed heat-treatment manufacturing process. The goal of Azure HT Technology was to create files that are extremely flexible and resistant to breaking even in the most complicated clinical cases.

## Endostar E3 Azure

- > **safe** - increased breaking resistance,
- > **extremely flexible** - follows even the most curved canal path,
- > **effective and easy** to use.

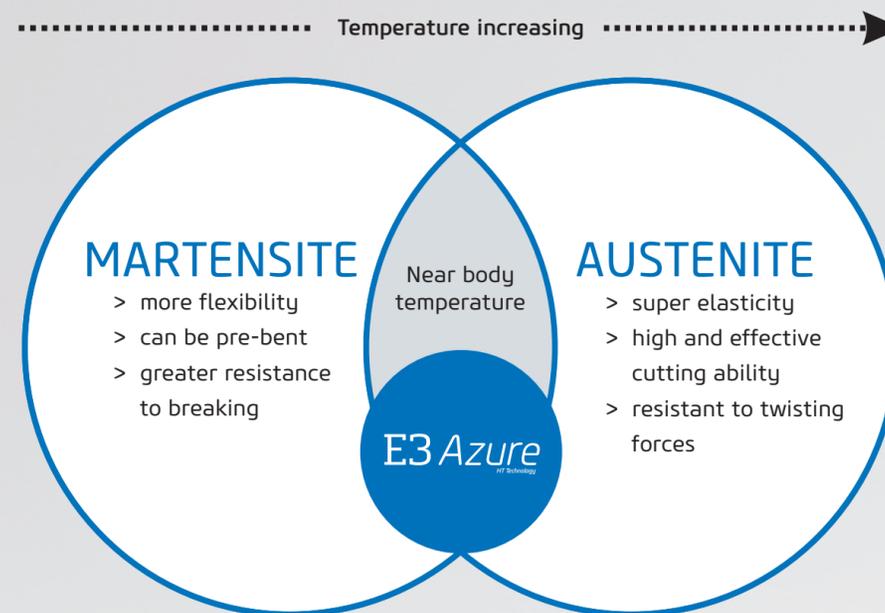

# Azure HT Technology - Color of Power

The Azure HT Technology process modifies the crystal structure of the nickel-titanium files. It allows for the martensite to austenite transformation to occur at near body temperature.

This process completely changes the properties of the files. The files can pre-bent before being inserted into the canal. They can easily follow even the most curved canal path, with a minimal risk of perforation, ledges or via falsa.

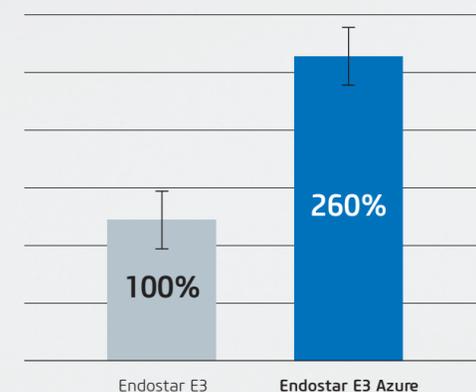

Feel the significant difference.  
New and unique.

**During root canal treatment (at near body temperature) the file uses the advantages, both of the martensite and austenite phases.**

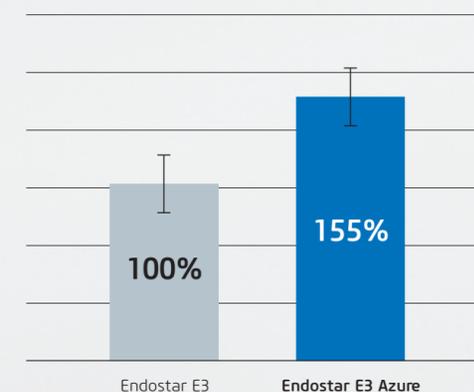

### Flexibility

Increased flexibility thanks to Azure HT Technology\*

### Resistance

Increased resistance to twisting forces compared to standard rotary instruments.

\* Internal studies performed according to ISO standards.

# Do it your way

We aimed at designing a new user-friendly system, which would be flexible, efficient and safe. We had no intention to change doctor's habits. Endostar E3 Azure was designed for 3 common types of the motion to achieve a perfect root canal preparation. The system is compatible with most of the handpieces.

### Rotary motion

The instruments rotate clockwise and with a set speed (CW - clock wise).

### Reciprocal motion

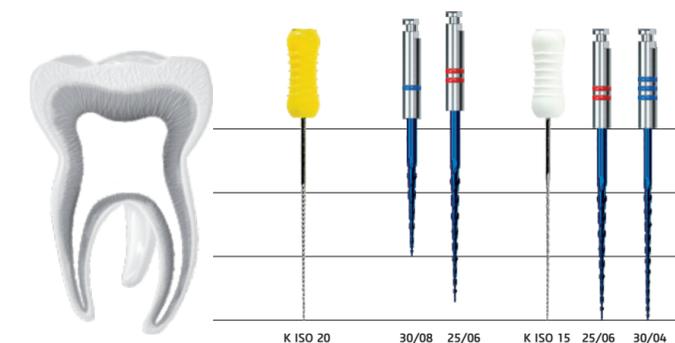

The instruments perform alternating clockwise (CW) and counter-clockwise (CCW) movements; the angle of clockwise (CW) rotation must be larger than counterclockwise rotation (CCW) e.g. 90 degrees CW and 30 degrees CCW.

### Complex motion

Combines the rotary and reciprocal motion. The files rotate until too high resistance in the canal is met. Then the reciprocal mode is activated (CW - CCW, net CW). Rotation mode is turned on again when the resistance returns to acceptable level. An example of complex motion is the OTR mode available in the Endostar Provider endomotor.
